

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Original) Core-drilling device comprising a drilling machine (3) with a core drill (4), a stand (2), a feeding housing that suspends the drilling machine and its movable along the stand, an electric drilling motor for rotation of the core drill in the drilling machine and a feeding unit (19) with an electric feeding motor (17) for feeding of the feeding housing along the stand, **characterised in** a control unit (30) that is electrically connected to the feeding unit, this feeding unit (30) comprising at least a first control (33) for manual influence of the feeding motor's (17) feeding force.

2. (Original) Device according to claim 1, **characterised in** that the feeding unit comprises a torque regulator (36) arranged to be influenced by the mentioned first control (33) for manual influence of the feeding motor's feeding force.

3. (Original) Device according to claim 1 or 2, **characterised in** that the feeding unit comprises a speed regulator (39) that can be manually influenced by means of a second control (34) on the control unit.

4. (Currently Amended) Device according to ~~claim 2 and 3~~, claim 2  
**characterised in** that mentioned controls constitute potentiometers (35, 38).

5. (Currently Amended) Device according to ~~any of the claims 1-4~~ claim 1,  
**characterised in** that the feeding unit comprises a torque limiting device for feeding  
the motor and that this device can be influenced by the mentioned first control.

6. (Currently Amended) Device according to ~~any of the claims 1-5~~ claim 1,  
**characterised in** that the control unit constitutes a portable unit, which via at least  
one cable or via radio communication is electrically connected to the feeding unit.

7. (Currently Amended) Device according to ~~any of the claims 1-6~~ claim 1,  
**characterised in** that the feeding unit also comprises means for controlling a water  
flow to the drilling head.

8. (Currently Amended) Device according to ~~any of the claims 1-7~~ claim 1,  
**characterised in** that the control unit comprises controls for alternate forward and  
backward operation of the feeding housing and for stationary position of the feeding  
motor.

9. (Currently Amended) Device according to ~~any of the claims 1-8~~ claim 1,  
**characterised in** that the control unit comprises a rotational speed indicator for the

feeding motor.

10. (Original) Device according to claim 9, **characterised in** that the rotational speed indicator constitutes a light which is arranged to be switched on and off at a frequency in proportion to the rotational speed.

11. (Currently Amended) Device according to ~~any of the claims 1-10~~ claim 1, **characterised in** that the control unit comprises an on-off control for automatic stopping of the system which comprises a feeding motor, drilling motor for rotation of the drill and for shutting off the water supply when the drill penetrates an object to be drilled or when the drill has reached a present depth in the working object.
